

## MyControl FAQ

Q: Is MyControl considered a walk-in tub?

A: It is more helpful to think of MyControl as a “bathing system” instead of a “walk-in tub.”

MyControl is both walk-in and accessible from a seated position. Additionally, typical walk-in tubs cannot speak to you, listen, remember or adapt to a user’s ability. MyControl’s combined accessibility features put it in a class by itself.

Q: Where are the water knobs, the faucet, and the door latching handles?

A: MyControl uses Smart electronics to control things like operation of the door latching system, door seal technology, water flow, the whirlpool, water safety, voice and sound control, virtual keypads, and the drain. MyControl operation doesn't require any protruding water faucets, knobs or manual door latching levers to push, pull or turn- so there isn't anything to hit your body on.

Q: Is MyControl Durable?

A: Yes. MyControl is manufactured with a custom stand-alone aluminum frame and cast acrylic to provide exceptional durability. All MyControl units for private use are covered under ABT’s standard residential warranty.

Q: Is MyControl safe?

A: Every shape and feature on a MyControl is designed to provide the safest user experience.

Q: Is MyControl recommended for seniors?

A: Yes. MyControl is universally designed to be used by people of any age, but the accessibility features built into the system make it ideal for seniors and individuals with mobility concerns.

Q: How much does a MyControl cost?

A: To get the most updated pricing information call ABT to speak with a representative.

Q: Is there funding available for MyControl?

A: Yes. A number of funding sources exist, but differ by location. Consumers with limited financial resources are urged to contact their local CIL to find assistance purchasing a system.

## MyControl Bathing System

Designed by Accessible Bath Technologies

[www.accessiblebathtechnologies.com](http://www.accessiblebathtechnologies.com)

## MyControl

ABT stands by MyControl as the most accessible bathing system for people with disabilities and mobility concerns in the world. Representing a revolutionary advancement in bathing technology, its innovations in electronic and mechanical engineering are a result of ABT's mission to design a product that can continually adapt to its user's ability. This remarkable system pushes the boundaries of assistive technology, empowering users and enabling them to bathe more independently within their own homes.

MyControl's universal design makes it unlike any other bathing product, including accessibility features that are patented by ABT, and unique to its bathing system. These features reduce the need for assistance while bathing, and for many this even means that a personal care attendant no longer has to be a part of the experience.

MyControl speaks to you, and it listens. It learns your preferences and remembers them, providing the highest level of customization. It can be accessed remotely from another room, clean itself, and automatically dispense soap.

Perhaps MyControl's most special feature is its patented bi-fold hinged door that swings inward; the only door with the ability to maneuver around a user's legs and feet.

MyControl is unusual. There are no door handles, knobs, or even a faucet. In fact there isn't anything that will pull, bump, or scrape. When usability and safety are important to a company, they design products that prove it. ABT proudly offers the My Control Bathing System, designed for accessibility, built for independence.

## Take Control

**Universal Design** means access for users regardless of their ability or age.

**Patented Bi-fold Hinged Door** is the only door that pivots around a user's legs and feet.

**Voice/Sound Control** learns the voice or any sound a user makes to operate the system.

**Zero-step Entrance** installation allows for barrier-free access and ease of motion.

**TouchAssist** features two 8-function keypads and virtual keypad technology that enables quick access to essential commands.

**Bluetooth Connectivity** equips MyControl with wireless communications capability.

**Braille Controls** provide an uncommon accessibility feature for real universal design.

**Whirlpool System** is powered by a ½ H.P. system that supplies strategically placed jets.

**Side Door Access** makes MyControl accessible from a seated position.

**Automatic Bath Heater** consistently maintains water temperature through a built-in thermostat.

**Timers & Safety Settings** can be personalized with a laptop or other compatible media device.

**AT-Link** software adjusts MyControl's operation to match a user's ability, size, and age.
